EASTWIND GOURMET · FROM A MONDAY GUESS TO A MONDAY ORDER

Forecast-driven replenishment

Order festival gifts for the week the festival falls, not the week it fell last year.

Prepared for your VP Merchandising and CIO

October 2026

YOUR OUTCOME

What you get

PEAK-GIFT SALES TO WIN BACK

$2–3M/yr

The opportunity in fuller festival shelves

Expected: 20–30% of the $10.3M/yr you lose on peak gifts today

MANAGER TIME

~15%

of order lines need a manager. The rest are routine

231 of 1,561 lines this order week need a decision

SEEN BEFORE THE WEEK STARTS

$3.6M

of peak-gift sales flagged as at risk

481 of 908 peak-gift lines need an order this week

VP Merchandising: full shelves in the festival lead-up, and your managers spend time only where it matters.

CIO: one platform from POS files to approved order, governed in Unity Catalog, with no vendor-to-vendor copies.

THE PROBLEM

Festivals move. Orders don't.

$17.8M/yr

lost sales from empty shelves across your 80 stores

$10.3M/yr

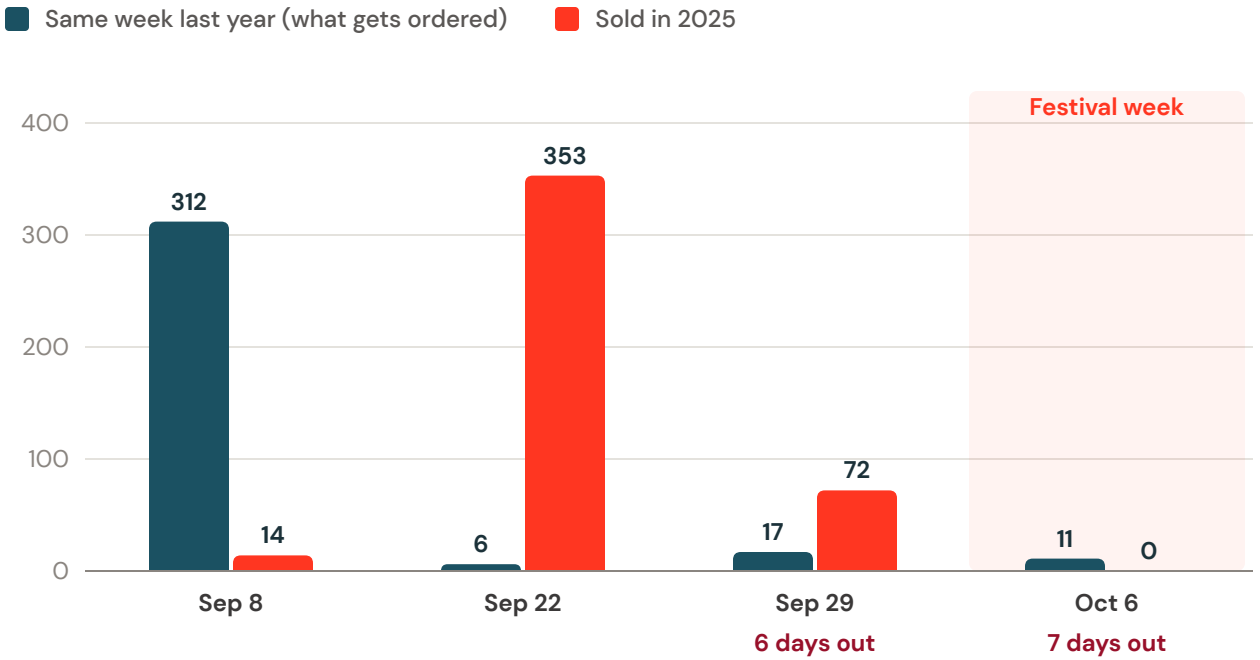

of that on peak gifts, 57.5% of all lost sales

18.7–21.1%

of peak-gift store-days out of stock in Mid-Autumn 2025, vs 8.6% overall

ZHONGSHAN SHOP · CLASSIC LOTUS MOONCAKE BOX · MID-AUTUMN 2025

Stocked for 2024's peak, out of stock for 2025's

Mid-Autumn fell on Sep 17 in 2024 and Oct 6 in 2025. Ordering by last year's calendar week stocked this line for the wrong week.

WHY IT'S HARD TODAY

Three things in the way

01

Fragmented feeds

POS · ERP inventory · Product catalog · Store master · Holiday calendar

Different owners, formats, and refresh cycles. Even your store IDs differ: DT001 vs L0001.

WITH DATABRICKS

Lakeflow reconciles all five into one governed gold table.

02

Stockouts hide demand

When the shelf is empty, sales stop. Your history records what sold, not what customers wanted.

WITH DATABRICKS

The forecast learns from weeks with stock on the shelf.

03

The usual fix: six tools

ETL tool · Warehouse · ML platform · OLTP database · BI / chat · App hosting

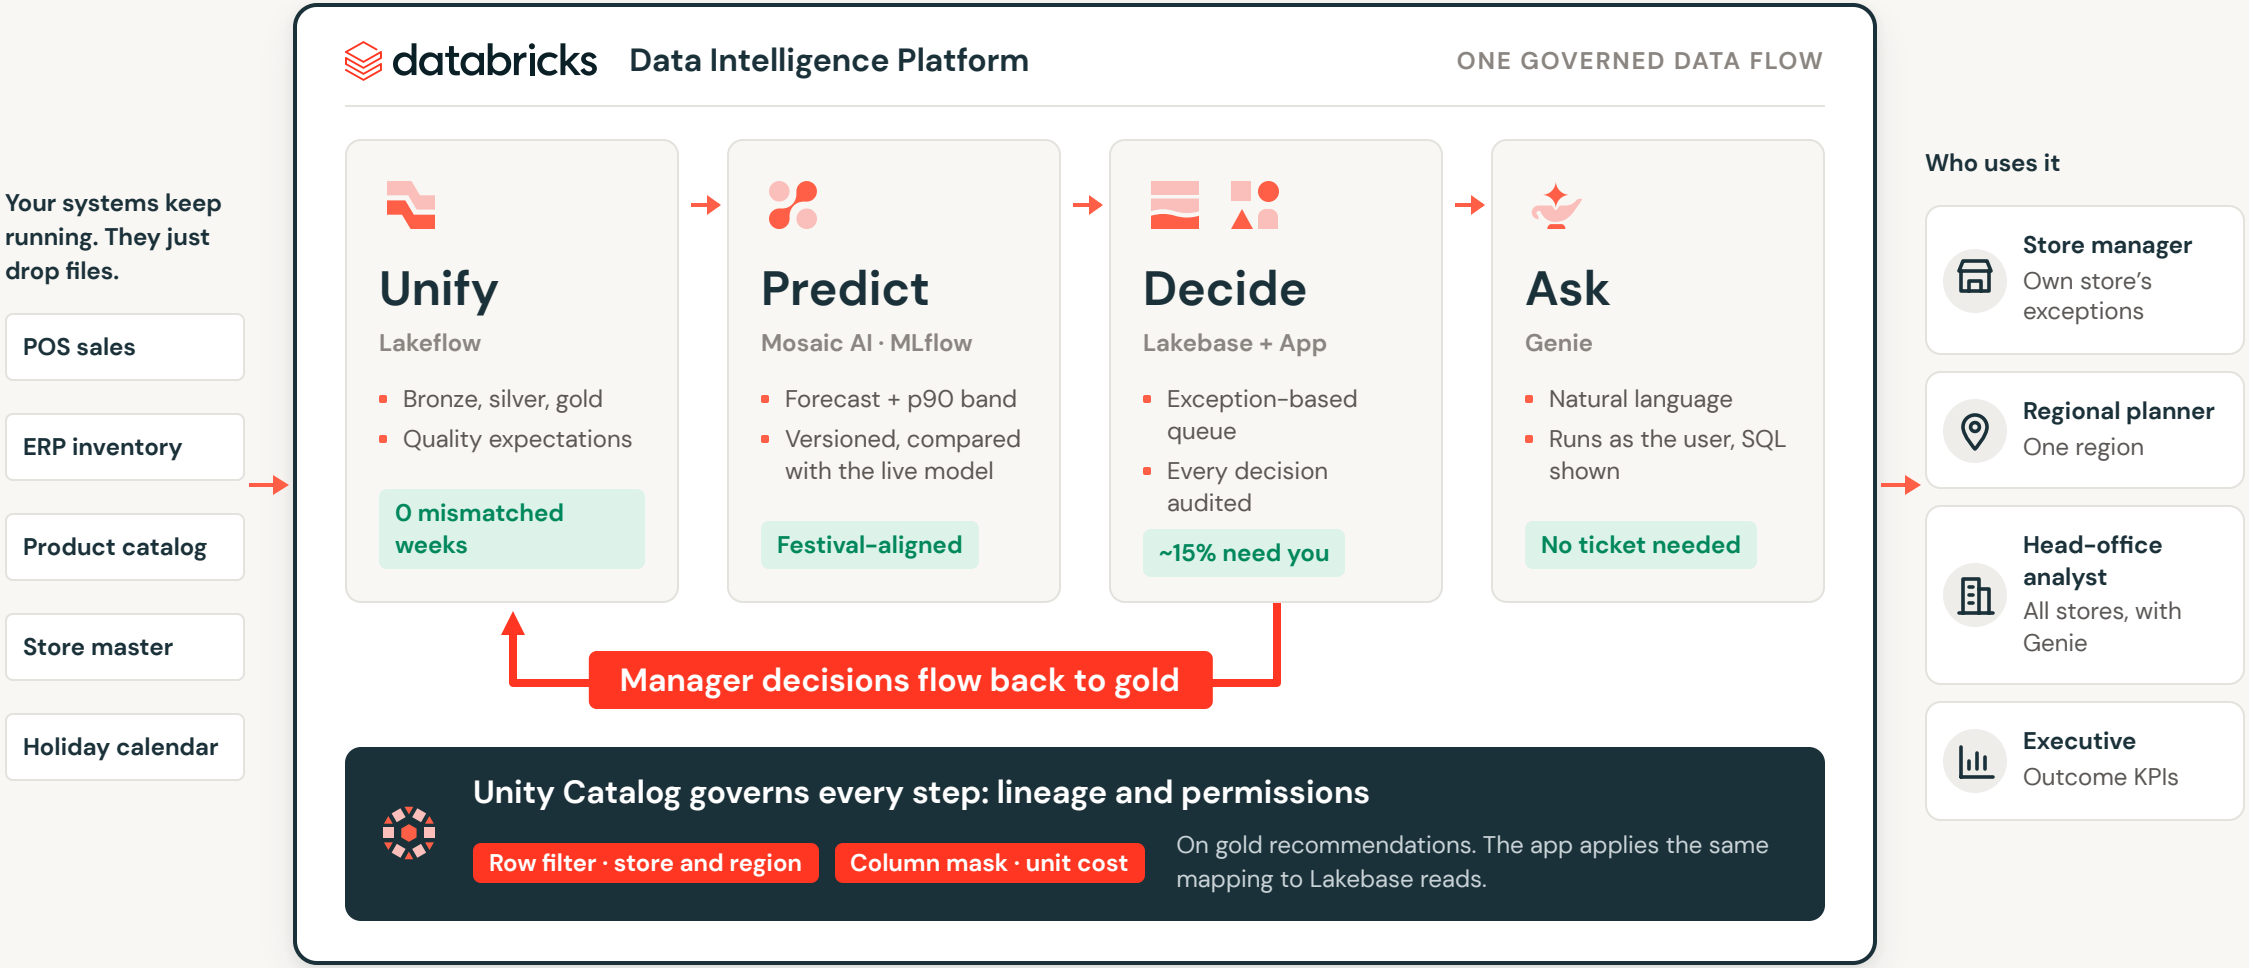

Each hop adds a copy, a handoff, and another set of permissions to keep in sync.

WITH DATABRICKS

One platform and one governed data flow.

HOW IT WORKS

One platform, end to end

OUTCOME 1 · UNIFY AND PREDICT

Right quantity, right week

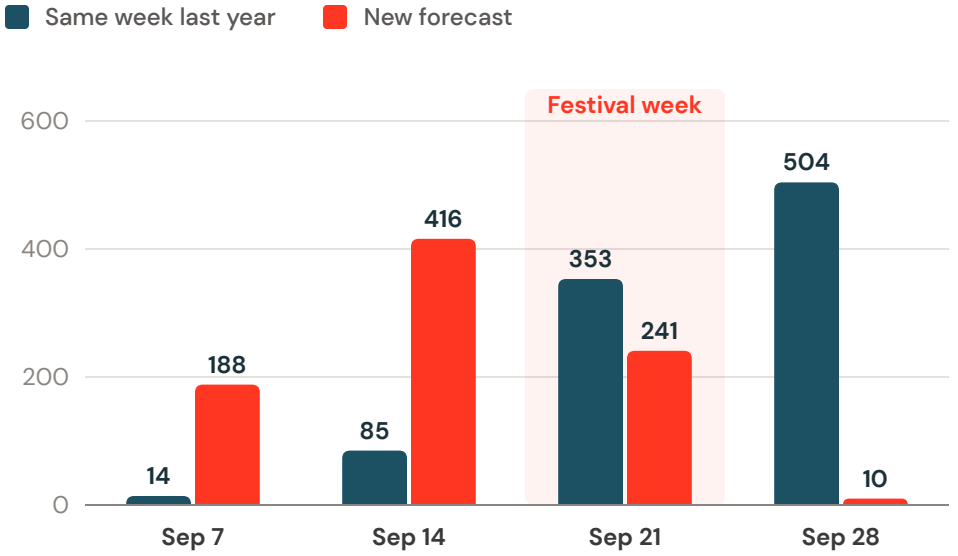

01 **Aligned to the festival**
The forecast compares this year with last year's festival weeks, not last year's calendar weeks.

02 **A buffer sized to the risk**
Every line carries a p90 plan-for quantity, so safety stock grows into the peak.

03 **Fewer empty shelves**
In the holiday backtest, modelled lost sales fell in all 6 season and channel windows.

ZHONGSHAN SHOP · CLASSIC LOTUS MOONCAKE BOX · 2026

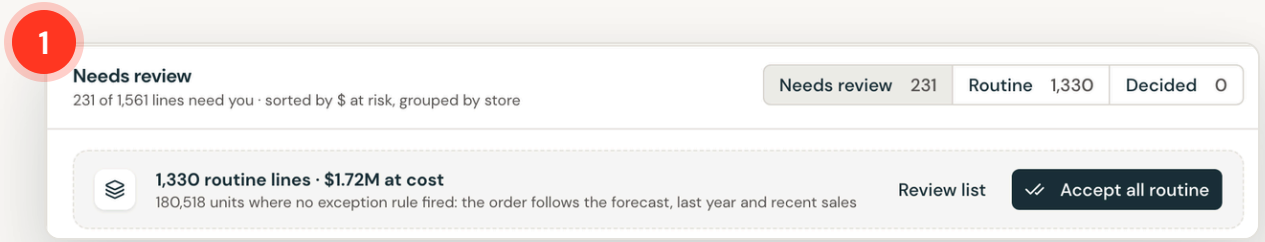

Volume moves into the lead-up weeks

Forecast units from the latest weekly run. Mid-Autumn 2026 is Sep 25.

OUTCOME 2 · DECIDE

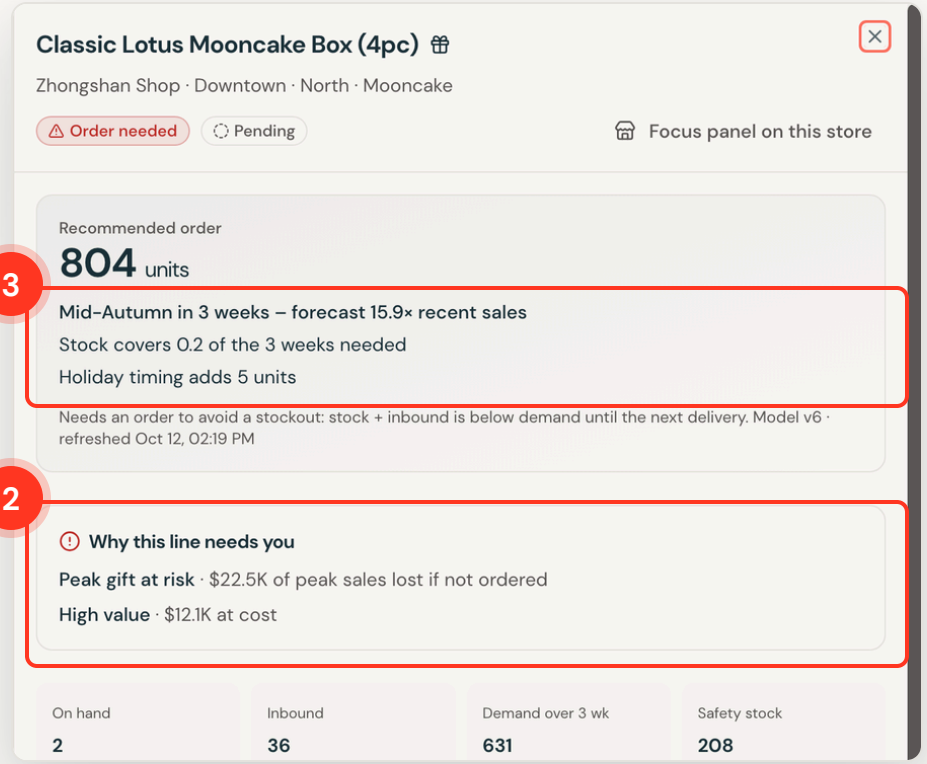

Managers review only the exceptions

1 231 of 1,561 lines need you
The 1,330 routine lines follow the forecast and can be accepted in one step.

2 Why this line needs you
Peak gift at risk, $22.5K of sales if not ordered. High value, $12.1K at cost.

3 Why this quantity
Mid-Autumn in 3 weeks, forecast 15.9x recent sales. Model v6.

OUTCOME 3 · ASK, GOVERNED

Ask anything, see only your stores

Ask Genie

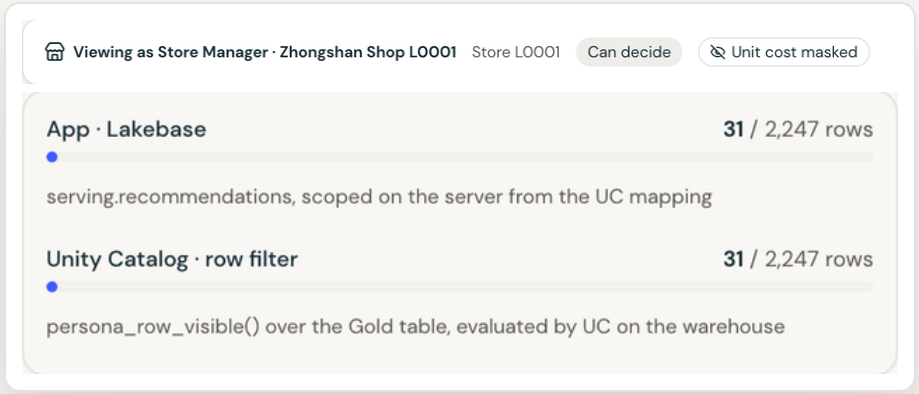

"Which highway stores face the highest Mid-Autumn stockout risk?"

Taian Service Area N: 6 SKUs, $56,791 at risk

Runs as you, on governed gold tables, SQL shown.

VIEWING AS · SAME TABLE, DIFFERENT ACCESS

PERSONA	STORE-SKUS VISIBLE	UNIT COST
Head-office analyst	2,247	Visible
Regional planner, North	782	Visible
Store manager, Zhongshan Shop	31	Masked

31 of 2,247 rows for this store manager, in the app and in Unity Catalog.

Row filter and column mask on the gold recommendations table; the app applies the same mapping to its Lakebase reads.

FOR THE CIO

0 mismatched weeks, gold vs source

40 of 40 planted bad records quarantined

Spoofed identity ignored; out-of-scope decisions refused

WHAT CHANGES FOR YOU

How your Monday changes

TODAY	WITH DATABRICKS
Order by gut feel and last year's calendar week	Order for the festival week, with a p90 buffer sized to the risk
Peak gifts run out before the festival	Volume lands in the lead-up weeks, when customers buy
Every line approved by hand	Review the ~15% of lines that need you; accept the routine rest in one step
POS, ERP, catalog, store, and holiday data apart, with no single view	One governed view in Unity Catalog; ask Genie, and decisions flow back to gold

SUGGESTED NEXT STEP

Plan your next order week together

Your POS and ERP teams drop the five feeds, your planners review the first queue with us, and you see your own peak-gift exposure before the next Lunar New Year.
